Attn: «Name, Designation»

ENGAGEMENT

KNEST digital platform + KIIT Lab Booking — build & launch
Public website, member portal, staff operations console and the KIIT lab booking platform, over one shared account and content model, delivered as an installable progressive web app.

Status: delivered, deployed and in production.
Basis: fixed price, charged module by module.

SCOPE AT MARKET RATE ₹6,16,000 616 hours at ₹1,000/hr — the <i>lowest</i> prevailing Indian agency rate for this work	KNEST PAYS ₹98,200 Fixed price. ₹159 per hour, effective — no overage, no change-order risk	KNEST SAVES ₹5,17,800 84% below the market floor. Basis set out on page 3
--	--	--

Scope of work & charges

Every line is a discrete, working module — no line repeats work charged under another. Each is priced as **estimated hours × a flat ₹200 per hour**, the same rate on all 53 lines, so nothing is padded and no line can be argued on rate. The struck-through column is what the same hours cost at ₹1,000/hr, the floor of the prevailing agency band. Amounts in Indian Rupees.

#	MODULE & DELIVERABLE	HRS	AT MARKET	YOUR PRICE (₹)
Foundation & Design System The base both platforms are built on.				
01	Project foundation Next.js 16 App Router on TypeScript strict mode, with the code standards, type generation and build pipeline the rest of the work depends on.	10	₹10,000	₹2,000
02	Data architecture One PostgreSQL database split into two schemas — editorial content kept apart from operational records — so the CMS never becomes the backend.	12	₹12,000	₹2,400
03	Schema, migrations & seed tooling 8 schema modules, versioned migrations and seeding scripts for first-run and demo data.	11	₹11,000	₹2,200
04	Design system & token pipeline Colour, typography, spacing, border and motion rules built as design tokens, so both platforms look like one product.	14	₹14,000	₹2,800
05	Component library & application shell 20 shared components — buttons, forms, tables, badges, timelines, empty and loading states — plus the responsive header, mobile drawer and footer.	16	₹16,000	₹3,200
Subtotal — Foundation & Design System		63	₹63,000	₹12,600
Identity, Accounts & Access One account per person, opening both the ecosystem platform and lab booking.				
06	Authentication & session management Auth.js v5 with revocable server-side sessions, password hashing and Google sign-in — removing someone locks them out on their next request, not whenever a token expires.	16	₹16,000	₹3,200
07	Account lifecycle flows Email verification and password reset end to end: token issue, expiry, single use and confirmation.	12	₹12,000	₹2,400

#	MODULE & DELIVERABLE	HRS	AT MARKET	YOUR PRICE (₹)
08	Roles & authorisation Student, founder, mentor, lab staff and admin roles, with permissions re-read from the database on every request and admin routes hidden rather than merely refused.	13	₹13,000	₹2,600
09	Account screens Six screens over one shared form, validation and error layer.	10	₹10,000	₹2,000
	Subtotal — Identity, Accounts & Access	51	₹51,000	₹10,200
Content Management Everything public is editable by KNEST staff without a developer.				
10	Payload CMS 3 staff console Admin console mounted inside the application, with staff signing in on the same single account as the rest of the platform.	15	₹15,000	₹3,000
11	Programme & venture content types Programs, Cohorts, Startups, Founders and Mentors — fields, relationships, validation and editor layout.	14	₹14,000	₹2,800
12	Editorial & site content types Events, Resources, Articles, FAQs, Partners, Infrastructure, Metrics, Testimonials, Staff, the media library and site-wide homepage settings.	15	₹15,000	₹3,000
13	Content delivery layer 11 typed services that read published content for the public site, with fallbacks so a database hiccup degrades gracefully instead of erroring.	13	₹13,000	₹2,600
	Subtotal — Content Management	57	₹57,000	₹11,400
Public Website The public front door — discover, self-locate, apply.				
14	Homepage Hero, the triple-helix ecosystem model, counters that read real data rather than invented numbers, and calls to action.	14	₹14,000	₹2,800
15	Programme pages Listing with filters, plus an individual page for every programme.	10	₹10,000	₹2,000
16	Ecosystem directories Startup and mentor listings, each with individual profile pages.	11	₹11,000	₹2,200
17	Events & resources Event and resource listings, event detail pages and long-form article rendering.	11	₹11,000	₹2,200
18	About, Ecosystem & Invest pages Three editorial pages covering the organisation, the ecosystem and the investor-facing pitch.	9	₹9,000	₹1,800
19	Site-wide search One search across programmes, startups, mentors, events and resources.	8	₹8,000	₹1,600
	Subtotal — Public Website	63	₹63,000	₹12,600
Member Experience & Applications What a student, founder or mentor uses after signing up.				
20	Guided onboarding & recommendation A short intake that places a person at their real stage and recommends the programmes that actually fit.	13	₹13,000	₹2,600
21	Application engine Question sets configured per programme, so staff add or change a question without a code change or a new release.	15	₹15,000	₹3,000
22	Application lifecycle & review states Draft, submit and review states with server-side validation and only permitted transitions, so an incomplete or tampered application cannot be submitted.	13	₹13,000	₹2,600
23	Member dashboard & event registration Journey status, application progress, registered events, and event registration with capacity respected.	12	₹12,000	₹2,400
24	Notification centre In-app and email notifications with read state, raised as applications, events and bookings progress.	9	₹9,000	₹1,800
	Subtotal — Member Experience & Applications	62	₹62,000	₹12,400

#	MODULE & DELIVERABLE	HRS	AT MARKET	YOUR PRICE (₹)
KIIT Lab Booking Platform Founders book real lab time across KIIT; lab staff approve, attend and verify it.				
25	Lab & facility registry Every bookable lab across KIIT — department, equipment, capacity, operating hours and the staff who run it — maintained by lab heads themselves.	12	₹12,000	₹2,400
26	Availability calendar & slot engine Bookable slots generated from each lab's operating hours, with double-booking made impossible at the database level, and blackout dates for holidays, exams and maintenance.	15	₹15,000	₹3,000
27	Booking request flow A founder picks a lab, sees live availability, chooses a slot and states purpose, headcount and equipment needed.	13	₹13,000	₹2,600
28	Lab-head approval console A request queue per lab, with approve, reject with a reason, or propose an alternative slot — and a record of who decided what, and when.	14	₹14,000	₹2,800
29	Lab assistant assignment & roster An approved slot gets a named assistant, who sees their own upcoming duty schedule rather than being told on the day.	11	₹11,000	₹2,200
30	Booking ticket & signed QR pass Approval issues a ticket carrying a cryptographically signed QR code, tied to that booking, that slot and that person — a screenshot of somebody else's pass does not work.	13	₹13,000	₹2,600
31	Two-sided QR check-in and check-out The student pass is scanned by the assigned lab staff, and the staff pass is scanned by the student. Both sides are recorded, so attendance is proved from both directions and neither party can claim it alone.	14	₹14,000	₹2,800
32	Lab utilisation reporting Bookings, attendance, no-shows and hours used, per lab and per department — the numbers KIIT needs to justify the facilities.	10	₹10,000	₹2,000
Subtotal — KIIT Lab Booking Platform		102	₹1,02,000	₹20,400
Staff Operations & Analytics The tools KNEST staff run programmes and reviews with.				
33	Application review console Reviewer queue with filters, full applicant detail, decisions with permitted transitions, and an audit trail against every reviewer.	15	₹15,000	₹3,000
34	Document handling Uploads to Amazon S3 with real file-type verification, and retrieval that is access-controlled rather than merely an unguessable link.	11	₹11,000	₹2,200
35	Analytics dashboard Activity tracking and the application funnel — how many people start, complete and are accepted.	11	₹11,000	₹2,200
Subtotal — Staff Operations & Analytics		37	₹37,000	₹7,400
Progressive Web App Installable on a phone, and usable in a lab basement with no signal.				
36	PWA packaging Web app manifest, icon and splash sets, and home-screen install on both Android and iOS — no app store, no review queue, no separate build to maintain.	10	₹10,000	₹2,000
37	Offline shell & background sync A service worker caching the app shell, an offline fallback, and queued actions that sync once signal returns instead of being lost.	12	₹12,000	₹2,400
38	Mobile camera QR scanning In-browser camera scanning for lab check-in and check-out, built to work on the patchy Wi-Fi found in most lab buildings.	11	₹11,000	₹2,200
Subtotal — Progressive Web App		33	₹33,000	₹6,600

#	MODULE & DELIVERABLE	HRS	AT MARKET	YOUR PRICE (₹)
Security & Anti-Abuse The platform holds applicant documents and gates physical lab access.				
39	Cloudflare Turnstile Invisible bot protection on sign-up, sign-in, password reset, application submit and booking request, verified server-side so the check cannot be skipped by calling the API directly.	12	₹12,000	₹2,400
40	Rate limiting & abuse controls Per-route token buckets on every sensitive endpoint, sized per route and enforced in the database rather than per server instance.	9	₹9,000	₹1,800
41	Browser hardening Content Security Policy, HSTS, and clickjacking, MIME-sniffing and referrer-leak protection, verified in report-only mode before being enforced.	9	₹9,000	₹1,800
42	Upload safety Magic-byte file verification rather than trusted extensions, type and size allow-lists, private storage, and nothing user-uploaded ever served as executable content.	9	₹9,000	₹1,800
43	Secrets, encryption & audit logging AWS Secrets Manager, least-privilege IAM roles, encryption at rest on RDS and S3, TLS in transit, and an audit log of every privileged action.	12	₹12,000	₹2,400
Subtotal — Security & Anti-Abuse		51	₹51,000	₹10,200
Cloud Infrastructure & Deployment Named services, provisioned, configured and live.				
44	AWS Amplify Hosting Git-connected CI/CD with server-side rendering, per-branch preview environments, atomic deploys and one-click rollback.	12	₹12,000	₹2,400
45	Amazon RDS for PostgreSQL 16 Instance provisioning, parameter and storage configuration, encryption, automated backups and point-in-time recovery.	12	₹12,000	₹2,400
46	Amazon S3 & CloudFront Private buckets for applicant documents, CDN delivery for public media, lifecycle rules and signed access.	10	₹10,000	₹2,000
47	Amazon SES Transactional mail with domain verification and the SPF, DKIM and DMARC records that keep KNEST mail out of spam folders.	9	₹9,000	₹1,800
48	Cloudflare edge DNS on the KNEST-supplied domain, TLS, WAF rules and DDoS protection sitting in front of everything.	9	₹9,000	₹1,800
49	Amazon CloudWatch Log aggregation, error and uptime alarms, and alert routing, so a failure is noticed before a user reports it.	8	₹8,000	₹1,600
Subtotal — Cloud Infrastructure & Deployment		60	₹60,000	₹12,000
Quality Assurance & Handover What makes it safe to put in front of students, staff and the public.				
50	Accessibility WCAG 2.1 AA pass across both platforms — contrast, keyboard operation, focus handling, screen-reader labelling and reduced-motion support.	11	₹11,000	₹2,200
51	Automated tests & flow verification Unit tests over the rules that must not break, plus scripted end-to-end verification of the auth, application and booking flows.	9	₹9,000	₹1,800
52	Performance & search visibility Image pipeline, load-time tuning, page metadata and social preview cards.	8	₹8,000	₹1,600
53	Documentation, training & handover Architecture, content editing and lab operations documentation, plus a walkthrough for KNEST staff and lab heads.	9	₹9,000	₹1,800
Subtotal — Quality Assurance & Handover		37	₹37,000	₹7,400

Scope subtotal (53 modules)	₹1,23,200
Less: KNEST institutional concession	– ₹25,000
GST	Not applicable

Total payable	₹98,200

Rupees Ninety-Eight Thousand Two Hundred Only

What this would cost elsewhere

The same 616 hours of work, costed four ways. Rates are indicative of the prevailing Indian market in 2026 and are given as ranges, not quotations — KNEST is welcome to test them against any two vendors.

ROUTE	BASIS	COST OF THE SAME SCOPE
Software development agency	616 hrs at ₹1,000–₹1,800/hr, plus project-management loading	₹6,16,000 – ₹11,08,800
Senior freelance developer	616 hrs at ₹800/hr, and typically no CMS, cloud, security or accessibility specialism in one person	₹4,92,800
In-house hire	One mid-level full-stack developer for the ~4 months this represents, fully loaded — before any AWS, security or accessibility expertise	₹2,20,000
This engagement	616 hrs at a flat ₹200/hr, less the concession — fixed price, overrun risk carried by the supplier	₹98,200

₹159/hr	6.3×	616 hrs	53
Effective rate KNEST pays, against a ₹1,000–₹1,800 market band	What the same scope costs at the market floor	Estimated engineering effort, itemised line by line	Discrete modules, each independently priced

Why the price is what it is

A price this far below market invites a fair question. The honest answer, in four parts:

- It is built by a KIIT student, for KIIT. The rate is a student rate, not a market rate. That is a deliberate concession to the institution, not a reflection of the work's value.
- KNEST is the reference deployment. Being able to point at a live platform serving a real university is part of the consideration. That has value to the supplier, and it is priced in.
- There is no agency overhead. No sales team, no account managers, no office, no margin stacked on subcontracted work. Agency rates carry all four; this does not.
- The estimate risk sits with the supplier. This is a fixed price against a fixed scope. If a module takes twice the estimated hours, that is absorbed, not invoiced. Agencies price that risk in; time-and-materials contracts pass it to the client.

Three-year cost of ownership

What KNEST actually spends to own and run both platforms — the number that matters to a budget, rather than a one-time invoice figure.

COST	YEAR 1	YEAR 2	YEAR 3	THREE-YEAR TOTAL
Build — one time, never repeats	₹98,200	—	—	₹98,200
Annual maintenance	₹96,000	₹96,000	₹96,000	₹2,88,000
AWS & Cloudflare, estimated	nil (free tier)	₹30,000	₹35,000	₹65,000
Software licences	nil	nil	nil	nil
Per-student or per-seat fees	nil	nil	nil	nil
Total	₹1,94,200	₹1,26,000	₹1,31,000	₹4,51,200

Three years of both platforms, fully maintained, comes to ₹4,51,200. That is 23% of what one mid-level in-house developer would cost over the same period — roughly 8.3 months of a single salary — and it buys a public website, an applications system, a lab booking platform, a staff console, a progressive web app and year-round operation of nine cloud services.

What KNEST owns outright

- The source code. Held in KNEST's own repository, with no supplier claim over it.
- The cloud accounts. Every AWS and Cloudflare resource sits in KNEST-owned accounts, not the supplier's.
- The data. Exportable in full, at any time, in open formats.
- No per-seat licence, ever. Unlimited students, founders, mentors, lab heads and admins at no additional cost.
- No lock-in. Standard Next.js, PostgreSQL and AWS. Any competent developer can take it over — the maintenance contract is a choice, not a dependency.
- No renewal cliff. Nothing stops working if a contract lapses.

This matters more than it first appears. Per-seat platforms in this category charge by the student, every year, forever, and hold the data. Here, growth from a hundred users to thirty thousand costs KNEST nothing in licensing.

Technology & infrastructure delivered

Named so KNEST knows exactly what it now owns and operates. All AWS resources are provisioned in the Asia Pacific (Mumbai) region, ap-south-1, and sit in KNEST-owned accounts — nothing is held under a supplier account.

LAYER	SERVICE	WHAT IT DOES HERE
Application	Next.js 16 · React 19 · TypeScript	Public site, member portal, lab booking and staff console in one codebase
Content	Payload CMS 3	Staff-editable content for every public content type
Hosting	AWS Amplify Hosting	CI/CD from Git, server-side rendering, preview environments, rollback
Database	Amazon RDS for PostgreSQL 16	Content, accounts, applications, bookings and audit records
Files & media	Amazon S3 + Amazon CloudFront	Private applicant documents; CDN delivery for public media
Email	Amazon SES	Verification, reset, notification and booking mail, with SPF/DKIM/DMARC
DNS, TLS & edge	Cloudflare	DNS on the KNEST domain, TLS, WAF rules, DDoS protection
Bot protection	Cloudflare Turnstile	Invisible challenge on sign-up, sign-in, reset, apply and booking
Secrets & access	AWS Secrets Manager + IAM	Credential storage and least-privilege service roles
Monitoring	Amazon CloudWatch	Logs, error and uptime alarms, alert routing
Mobile	Progressive Web App	Installable on Android and iOS, offline shell, camera QR scanning

What this invoice includes

Delivered with the build

- Full source code and ownership, handed over in the KNEST repository.
- All AWS and Cloudflare resources provisioned in KNEST-owned accounts, with credentials handed over.
- Production deployment on AWS Amplify, configured and live.
- RDS provisioning, schema migrations, backups enabled and first-run seed data.
- Staff admin console with content editing for every public content type.
- Lab-head and lab-assistant consoles, with the QR pass and scanning flow working end to end.
- Architecture, content-editing and lab-operations documentation.
- One handover walkthrough for KNEST staff and one for lab heads.
- 30 days of post-launch defect support from the invoice date, at no charge.

Not included in this invoice

- Domain name — being provided and paid for by KNEST.
- AWS charges — Amplify, RDS, S3, CloudFront, SES, Secrets Manager and CloudWatch — billed by AWS directly to KNEST.
- Cloudflare charges, if KNEST moves beyond the free plan.
- Content writing, photography, lab equipment data and bulk data entry.
- Physical QR signage, scanner hardware or tablets for lab desks.
- Third-party licences or paid plugins, should any be added later.
- New modules or features beyond the 53 listed, which are quoted separately.
- Ongoing maintenance after the 30-day defect window — covered by the separate annual maintenance proposal.

Deployment & domain. The platform runs on AWS Amplify Hosting against Amazon RDS, behind Cloudflare. The domain is supplied and paid for by KNEST — once its nameservers are pointed at Cloudflare as documented in the handover notes, the site serves on the KNEST domain over HTTPS with the WAF and Turnstile active. Configuring DNS, TLS and the edge rules is included in the charges above; buying and renewing the domain is not.

Payment

Bank transfer / UPI

Account holder	«Account holder name»
Bank & branch	«Bank name, Branch»
Account number	«Account number»
IFSC	«IFSC»
UPI	«upi-id@bank»

Terms

- Payable within 15 days of the invoice date.
- Please quote invoice number **KNEST/2026-27/001** in the transfer reference.
- GST is not applicable — supplier is not registered under GST. (Delete this line and add a GST row above if registered.)
- Tax deducted at source, if any, may be deducted at the applicable rate against the PAN above.

- Source code and deployment credentials transfer to KNEST on receipt of full payment.
