|---------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------|

## Scope of work & charges

Every line is a discrete, working module — no line repeats work charged under another. Each is priced as **estimated hours × a flat ₹200 per hour**, the same rate on all 53 lines, so nothing is padded and no line can be argued on rate. The struck-through column is what the same hours cost at ₹1,000/hr, the floor of the prevailing agency band. Amounts in Indian Rupees.

| #                                                                                                                   | MODULE & DELIVERABLE                                                                                                                                                                                                         | HRS | AT MARKET | YOUR PRICE (₹) |
|---------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|-----------|----------------|
| <b>Foundation &amp; Design System</b> The base both platforms are built on.                                         |                                                                                                                                                                                                                              |     |           |                |
| 01                                                                                                                  | <b>Project foundation</b><br>Next.js 16 App Router on TypeScript strict mode, with the code standards, type generation and build pipeline the rest of the work depends on.                                                   | 10  | ₹10,000   | ₹2,000         |
| 02                                                                                                                  | <b>Data architecture</b><br>One PostgreSQL database split into two schemas — editorial content kept apart from operational records — so the CMS never becomes the backend.                                                   | 12  | ₹12,000   | ₹2,400         |
| 03                                                                                                                  | <b>Schema, migrations &amp; seed tooling</b><br>8 schema modules, versioned migrations and seeding scripts for first-run and demo data.                                                                                      | 11  | ₹11,000   | ₹2,200         |
| 04                                                                                                                  | <b>Design system &amp; token pipeline</b><br>Colour, typography, spacing, border and motion rules built as design tokens, so both platforms look like one product.                                                           | 14  | ₹14,000   | ₹2,800         |
| 05                                                                                                                  | <b>Component library &amp; application shell</b><br>20 shared components — buttons, forms, tables, badges, timelines, empty and loading states — plus the responsive header, mobile drawer and footer.                       | 16  | ₹16,000   | ₹3,200         |
| Subtotal — Foundation & Design System                                                                               |                                                                                                                                                                                                                              | 63  | ₹63,000   | ₹12,600        |
| <b>Identity, Accounts &amp; Access</b> One account per person, opening both the ecosystem platform and lab booking. |                                                                                                                                                                                                                              |     |           |                |

*Rupees Ninety-Eight Thousand Two Hundred Only*

What this would cost elsewhere

The same 616 hours of work, costed four ways. Rates are indicative of the prevailing Indian market in 2026 and are given as ranges, not quotations — KNEST is welcome to test them against any two vendors.

| ROUTE                       | BASIS                                                                                                                                    | COST OF THE SAME SCOPE |
|-----------------------------|------------------------------------------------------------------------------------------------------------------------------------------|------------------------|
| Software development agency | 616 hrs at ₹1,000–₹1,800/hr, plus project-management loading                                                                             | ₹6,16,000 – ₹11,08,800 |
| Senior freelance developer  | 616 hrs at ₹800/hr, and typically no CMS, cloud, security or accessibility specialism in one person                                      | ₹4,92,800              |
| In-house hire               | One mid-level full-stack developer for the ~4 months this represents, fully loaded — before any AWS, security or accessibility expertise | ₹2,20,000              |
| This engagement             | 616 hrs at a flat ₹200/hr, less the concession — fixed price, overrun risk carried by the supplier                                       | ₹98,200                |

|                                                                |                                               |                                                     |                                             |
|----------------------------------------------------------------|-----------------------------------------------|-----------------------------------------------------|---------------------------------------------|
| ₹159/hr                                                        | 6.3×                                          | 616 hrs                                             | 53                                          |
| Effective rate KNEST pays, against a ₹1,000–₹1,800 market band | What the same scope costs at the market floor | Estimated engineering effort, itemised line by line | Discrete modules, each independently priced |

Why the price is what it is

A price this far below market invites a fair question. The honest answer, in four parts:

- **It is built by a KIIT student, for KIIT.** The rate is a student rate, not a market rate. That is a deliberate concession to the institution, not a reflection of the work’s value.
- **KNEST is the reference deployment.** Being able to point at a live platform serving a real university is part of the consideration. That has value to the supplier, and it is priced in.
- **There is no agency overhead.** No sales team, no account managers, no office, no margin stacked on subcontracted work. Agency rates carry all four; this does not.
- **The estimate risk sits with the supplier.** This is a fixed price against a fixed scope. If a module takes twice the estimated hours, that is absorbed, not invoiced. Agencies price that risk in; time-and-materials contracts pass it to the client.

Three-year cost of ownership

What KNEST actually spends to own and run both platforms — the number that matters to a budget, rather than a one-time invoice figure.

| COST                            | YEAR 1          | YEAR 2  | YEAR 3  | THREE-YEAR TOTAL |
|---------------------------------|-----------------|---------|---------|------------------|
| Build — one time, never repeats | ₹98,200         | —       | —       | ₹98,200          |
| Annual maintenance              | ₹48,000         | ₹48,000 | ₹48,000 | ₹1,44,000        |
| AWS & Cloudflare, estimated     | nil (free tier) | ₹30,000 | ₹35,000 | ₹65,000          |
| Software licences               | nil             | nil     | nil     | nil              |
| Per-student or per-seat fees    | nil             | nil     | nil     | nil              |
| Total                           | ₹1,46,200       | ₹78,000 | ₹83,000 | ₹3,07,200        |

Three years of both platforms, fully maintained, comes to ₹3,07,200. That is 16% of what one mid-level in-house developer would cost over the same period — roughly 5.7 months of a single salary — and it buys a public website, an applications system, a lab booking platform, a staff console, a progressive web app and year-round operation of nine cloud services.

What KNEST owns outright

- **The source code.** Held in KNEST’s own repository, with no supplier claim over it.
  - **The cloud accounts.** Every AWS and Cloudflare resource sits in KNEST-owned accounts, not the supplier’s.
  - **The data.** Exportable in full, at any time, in open formats.
- **No per-seat licence, ever.** Unlimited students, founders, mentors, lab heads and admins at no additional cost.
  - **No lock-in.** Standard Next.js, PostgreSQL and AWS. Any competent developer can take it over — the maintenance contract is a choice, not a dependency.
  - **No renewal cliff.** Nothing stops working if a contract lapses.

This matters more than it first appears. Per-seat platforms in this category charge by the student, every year, forever, and hold the data. Here, growth from a hundred users to thirty thousand costs KNEST nothing in licensing.

Technology & infrastructure delivered

Named so KNEST knows exactly what it now owns and operates. All AWS resources are provisioned in the Asia Pacific (Mumbai) region, ap-south-1, and sit in KNEST-owned accounts — nothing is held under a supplier account.

| LAYER            | SERVICE                            | WHAT IT DOES HERE                                                         |
|------------------|------------------------------------|---------------------------------------------------------------------------|
| Application      | Next.js 16 · React 19 · TypeScript | Public site, member portal, lab booking and staff console in one codebase |
| Content          | Payload CMS 3                      | Staff-editable content for every public content type                      |
| Hosting          | AWS Amplify Hosting                | CI/CD from Git, server-side rendering, preview environments, rollback     |
| Database         | Amazon RDS for PostgreSQL 16       | Content, accounts, applications, bookings and audit records               |
| Files & media    | Amazon S3 + Amazon CloudFront      | Private applicant documents; CDN delivery for public media                |
| Email            | Amazon SES                         | Verification, reset, notification and booking mail, with SPF/DKIM/DMARC   |
| DNS, TLS & edge  | Cloudflare                         | DNS on the KNEST domain, TLS, WAF rules, DDoS protection                  |
| Bot protection   | Cloudflare Turnstile               | Invisible challenge on sign-up, sign-in, reset, apply and booking         |
| Secrets & access | AWS Secrets Manager + IAM          | Credential storage and least-privilege service roles                      |
| Monitoring       | Amazon CloudWatch                  | Logs, error and uptime alarms, alert routing                              |
| Mobile           | Progressive Web App                | Installable on Android and iOS, offline shell, camera QR scanning         |

What this invoice includes

Delivered with the build

- Full source code and ownership, handed over in the KNEST repository.
- All AWS and Cloudflare resources provisioned in KNEST-owned accounts, with credentials handed over.
- Production deployment on AWS Amplify, configured and live.
- RDS provisioning, schema migrations, backups enabled and first-run seed data.
- Staff admin console with content editing for every public content type.
- Lab-head and lab-assistant consoles, with the QR pass and scanning flow working end to end.
- Architecture, content-editing and lab-operations documentation.
- One handover walkthrough for KNEST staff and one for lab heads.
- 30 days of post-launch defect support from the invoice date, at no charge.

Not included in this invoice

- Domain name — being provided and paid for by KNEST.
- AWS charges — Amplify, RDS, S3, CloudFront, SES, Secrets Manager and CloudWatch — billed by AWS directly to KNEST.
- Cloudflare charges, if KNEST moves beyond the free plan.
- Content writing, photography, lab equipment data and bulk data entry.
- Physical QR signage, scanner hardware or tablets for lab desks.
- Third-party licences or paid plugins, should any be added later.
- New modules or features beyond the 53 listed, which are quoted separately.
- Ongoing maintenance after the 30-day defect window — covered by the separate annual maintenance proposal.

**Deployment & domain.** The platform runs on AWS Amplify Hosting against Amazon RDS, behind Cloudflare. The domain is supplied and paid for by KNEST — once its nameservers are pointed at Cloudflare as documented in the handover notes, the site serves on the KNEST domain over HTTPS with the WAF and Turnstile active. Configuring DNS, TLS and the edge rules is included in the charges above; buying and renewing the domain is not.

Payment

Bank transfer / UPI

|                |                       |
|----------------|-----------------------|
| Account holder | «Account holder name» |
| Bank & branch  | «Bank name, Branch»   |
| Account number | «Account number»      |
| IFSC           | «IFSC»                |
| UPI            | «upi-id@bank»         |

Terms

- Payable within 15 days of the invoice date.
- Please quote invoice number **KNEST/2026-27/001** in the transfer reference.
- GST is not applicable — supplier is not registered under GST. (Delete this line and add a GST row above if registered.)
- Tax deducted at source, if any, may be deducted at the applicable rate against the PAN above.

- Source code and deployment credentials transfer to KNEST on receipt of full payment.
